

## **Cause No Harm**

### **Keeping Everything in Balance**

We are all aware that Health, Safety and the Environment must be a priority in executing our business and to Cause No Harm in the process.

The difficulty arises when we are faced with deadlines, tight schedules, production rates, quality issues, and other challenges.

We need to get on with the job. We need to sail at a certain date. We need to maintain our project schedule. We need to maintain our productivity and quality standards and still arrive at the end of the project on time, within budget and without harming anyone or anything in the process.

This can be a tall order and challenges all of us involved

So how do we keep the scales from tipping heavily to one area, which can potentially affect other areas?

### **Maintaining the Balance**

The primary consideration must be that all of our efforts are integrated – they are inextricably linked together.

No one department, section or person stands alone and can fulfil the requirements of a project without the direct cooperation and assistance from others.

When our thinking changes from just our specific scope of work, to that of integrated efforts, then we can maintain equilibrium.

It is really an awareness issue that requires us to expand our thinking from self or our own department, to that of a fully functioning company that relies on integrated activities that flow smoothly from one department to another throughout the organisation.

“No man is an island” as the saying goes, which serves as a gentle reminder to us, that we are all play an important role in the Swiber Team.

**Our Vision:**  
**Together we establish a world class oil and gas service organisation by 2012**

### **Did You Know?**

We have received a Letter of Intent (LOI) for a US\$35 million project in offshore Indonesia. This latest LOI represents an extension of a contract awarded to Swiber in November 2007.

Swiber and Principia have formed a Joint Venture (JV) to provide services to the offshore and marine industry in S. E. Asia. Principia, a subsidiary of AREVA within AREVA TA Business Unit, is specialised in scientific engineering and studies and in the design, manufacture and sale of related software applications in the worldwide marine and offshore business.

Together we continue to grow and expand our services and for this, I thank you once again.
